SUMMARY

Unity developer with 4 years of experience across two mobile game studios and 50+ shipped commercial titles on Google Play and the App Store. Focused on reusable framework architecture, Unity editor tooling, build-size and runtime optimization, real-time multiplayer, and live-ops integration.

50+ titles shipped · **Reusable framework** behind the studio catalogue · **400 levels in 7 days** via a custom editor tool · **90% build-size reduction** (200 MB → 20 MB)

TECHNICAL SKILLS

Language	C#
Engine	Unity — reusable package design, editor tooling, Addressables, Shader Graph, particle systems, ScriptableObject-driven data
Gameplay Systems	AI & NavMesh, state machines, Animator controllers & blend trees, Timeline, DOTween, object pooling
Optimization	Unity Profiler, draw-call reduction & batching, GC-allocation reduction, memory & texture optimization, load time, build size, low-end Android
Multiplayer	Photon PUN2 — real-time PvP, matchmaking, lobby & room management
Backend & Live-Ops	Firebase (Firestore, Analytics, Crashlytics, Remote Config), GameAnalytics
Monetization	Appodeal, AdMob, IronSource mediation; Unity IAP
Tools & Release	Plastic SCM (Unity Version Control), Git/GitHub, Google Play Console, App Store Connect
Platforms	Android, iOS, WebGL

PROFESSIONAL EXPERIENCE

UltraGames Entertainment

Feb 2024 – Present

Senior Unity Game Developer

Ahmedabad, India

- Architected the reusable Unity framework used as the starting point for new titles across a 50+ game catalogue: modular Appodeal / AdMob / IronSource and Unity IAP integrations, an analytics package, and a standardised UI and game-flow layer, so new games inherit this infrastructure instead of rebuilding it per project.
- Developed a Unity editor tool generating playable levels from image and word-list input for [Image Crossword](#), letting designers produce **400 levels in 7 days** without programmer support.
- Reduced build size by approximately **90%, from 200 MB on Android to 20 MB on WebGL**, using Addressables plus asset, texture and memory optimization.
- Implemented real-time PvP multiplayer in [Grass Land](#) on Photon PUN2, covering rooms, lobbies, matchmaking and player state synchronisation.
- Integrated Firebase Remote Config, Firestore and Crashlytics across titles, enabling server-side tuning of difficulty, pricing and events without new builds.
- Delivered Firestore leaderboards, server-driven daily rewards, localization and multiple rule variants for [Poker Hands](#) and [Teen Patti Expert](#), with adaptive phone and tablet UI.
- Built embedded mini-games (Match-3, block colour, mirror puzzle) and modular quest/resource systems for [Lost Adventure](#).

Full catalogue: [50+ titles shipped at UltraGames on Google Play](#)

FlyingCaps Technologies

Sep 2022 – Jan 2024

Junior Unity Game Developer

Hyderabad, India

- Led core gameplay systems for [Nitro Xtreme Racer](#), an *NFS: No Limits*-style arcade racer: racing logic, lap tracking and drift detection.
- Built a ScriptableObject-driven content pipeline for hundreds of levels and vehicles across [Real Traffic Car Driving](#) and [Real Traffic Bike Driving](#) (*Traffic Racer* / *Traffic Rider*-style endless driving).
- Implemented traffic AI, vehicle controls and an observer-pattern event layer for scoring, win/lose states and UI.
- Implemented object pooling and raycast-based enemy AI for [Slink.io 3D](#).
- Developed game UI, animation and effects (DOTween) for [Marbles Magic](#), a Zuma-style marble shooter.

EDUCATION

Bachelor of Computer Applications (BCA) — Nabapravat Academy for Management Education, Cuttack

2022
